

In this subject, students will follow the design process in response to client briefs from the Industrial, Environmental, and Communication fields of design. Students will experiment with a variety of methods, media and materials, including pencil rendering, technical drawing, painting, model-making, and digital methods, with students able to access all programs in the Adobe CC suite via the Technology Portal. Students will build their awareness of how designers use the elements and principles of design to communicate ideas visually. This area of study leads into VCE Visual Communication Design Unit 1 - 4, and will be both practical and theory based. Please note, students will require an A3 visual diary if they choose this subject.
