

VCE Global Health examines the way humans interact with and relate to natural environments. The course explores a variety of environmental factors that contribute towards health inequalities on a global scale. Students investigate global action to improve worldwide health, with a focus on sustainability. The units enable students to make critically informed comments on questions of environmental sustainability and to understand the importance of environmental health to support the needs of all people.

*At completion of this course, the objective is for students to receive a pass in both Unit 1 Outdoor and Environmental Studies and Unit 2 Health and Human Development.*
